

Priority Networks is the most experienced provider of integrated voice and data networks for event facilities. This expertise extends to the management of existing traditional telephony infrastructures, which we do for many.

Managing the complexity of digital systems while ensuring the reliability and performance of legacy systems requires expert staff with very specific skills. Priority-trained telecommunication staff receives training tailored to the event industry where downtime during events is simply not an option. Our breadth of experience ensures that when problem do occur, that resources are available to quickly troubleshoot and solve most any problem.

PNI is pioneering a new breed of voice services for the event industry that includes many new converged voice and data technologies. The variety of telecom infrastructures PNI manages ensure that that Priority can provide an architecture and technology plan that is utilizes best of breed technology, is cost-effective and is proven. It's often difficult to make the case to expand or upgrade tradition telecom services when many have seen declining revenue for these services. We are actively helping facilities migrate from legacy systems to digital, leveraging the investments made for networked services. We also actively extend the lifespan of legacy systems, often with specialized and ancillary services unavailable elsewhere.

We are unmatched in the industry with billing and call accounting services that can be uniquely tailored to each of our clients' requirements. Combined with PNI's industry leading customer service, we provide a complete solution for facilities telecom needs. This solution is unique in being able to bring profitability back to telecom, while enhancing service levels and reliability at the same time. Priority is dedicated to being your best choice for managing telecommunications.
